

Installation Guide Internet Relay Chat:

The First 3 steps will have 3 variation (a=Windows,b=Linux,c=Mac)

1a. Go to "<http://silverex.org/>" (Windows)

1b. Go to "<http://xchat.org/>" (Linux)

1c. Go to "<http://xchataqua.sourceforge.net>" (Mac)

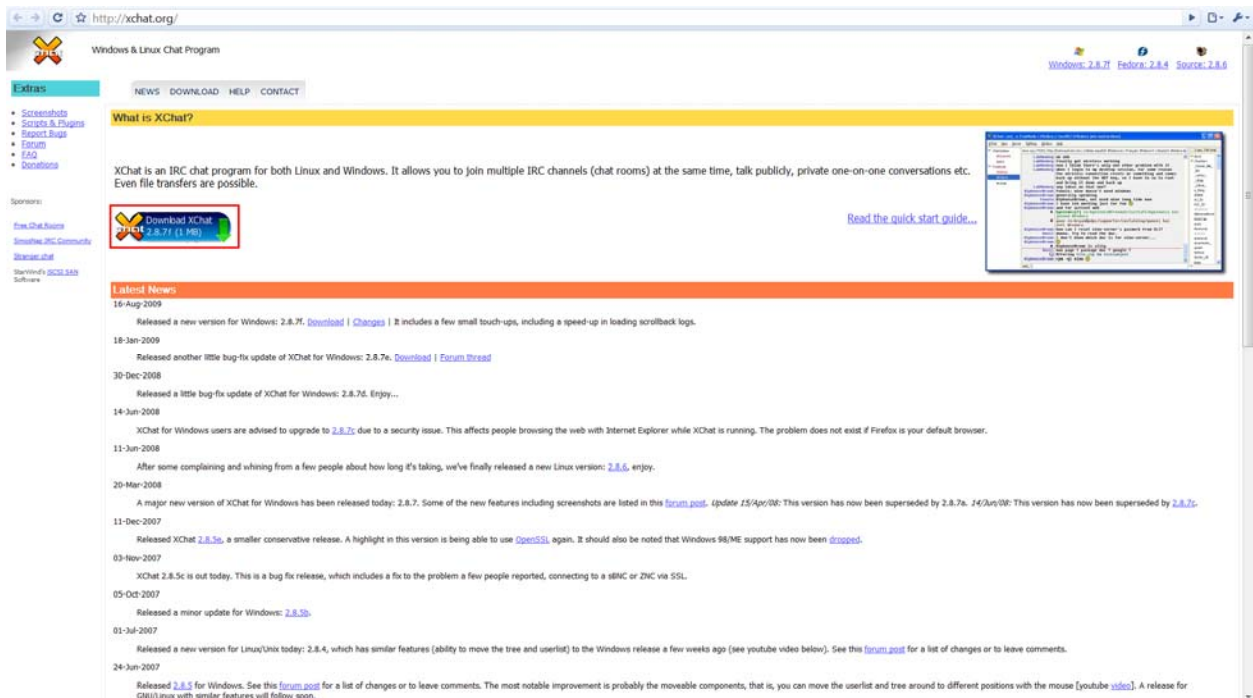

2a. Go to "Download" (Windows)

The screenshot shows the 'X-Chat 2 for Windows' website. The 'Download' tab is selected and highlighted in red. Below the navigation tabs, there is a list of news items, each starting with a date and a brief description of updates or changes. The news items are as follows:

- 03/08/2009 X-Chat 2.6.2 is out. Upgraded ActivePerl to 5.8.6, ActivePython to 2.6.11 GTK+ is now 2.14.2, OpenSSL 0.9.8j. If you get crashing tray icon, please disable it in X-Chat options, there's now external plugin which does the job.
- 09/22/2007 X-Chat 2.6.4 is out. Inno Setup, ActivePerl, ActivePerl is updated. There's an entry in the FAQ on how to add eye candy theme. And Hackers Guide is updated. GTK+ is now 2.10.4.
- 03/10/2007 X-Chat 2.6.0 is out. Inno Setup is updated. Hopefully, this time it won't need additional DLL files. GTK+ is now 2.10.9. X-Chat plugin was removed.
- 12/22/2006 X-Chat 2.6.8 is out. As usual, check the [changelog](#). Removed Python plugin temporarily, as it crashed X-Chat (a fix, anyone?). Inno Setup and Ruby are updated.
- 10/08/2006 Updated to X-Chat 2.6.6. GTK+ to 2.10.6.
- 04/27/2006 X-Chat 2.6.4 is out. Updated GTK+ to 2.8.12. Python plugin to 2.4 (use the [official](#) version). Also, ActivePerl plugin is updated.
- 04/09/2006 X-Chat 2.6.2 is out. Check the [changelog](#), as usual ActivePerl is now 5.8.5.
- 03/12/2006 Added [demon](#) to new build announcements feed in addition to RSS 2.0.
- 03/10/2006 Finally, I have successfully recreated my build environment (Visual Studio 2003 still). X-Chat is updated to latest CVS. GTK+ is now 2.6.10-20050823. There might be some other updates, but I cannot say what is upgraded, because I lost all my previous download, and now I have redownloaded everything anyway.
- 02/16/2006 My laptop's hard disk has crashed with all my data. Because of that, there won't be X-Chat 2.6.1 release till the end of January till I get a new HDD, finish my exam session and reinstall everything. Current installer has most features which are in 2.6.1.
- 12/10/2005 X-Chat is updated to latest CVS version. ActivePerl and ActivePerl are updated to their latest versions, Inno Setup is now 5.16, and GTK+ is reverted back to 2.6 series (2.6.9), as GTK+ 2.8 has too many bugs on Windows.
- 12/02/2005 At last, X-Chat 2.6.0 is out. New features include tree view layout, menu reorganization, other CSS polishing and lots of bug fixes. This build now includes a bunch of [demon's](#) and [Pango's](#) patches, including improved OJCPU view in version reply, 64bit DCC, native color picker and native file save dialog, new version of X-Chat plugin features better defaults—now it is showing only one balloon at a time on screen.
- 10/23/2005 Updated to X-Chat latest 2.4 stable branch CVS. GTK+ is now 2.6.6, using Cairo vector library. ActivePerl is now 8.4.12, and OpenSSL 0.9.8a, which fixes security flaw. Added Gujarati and Hungarian translations.
- 09/27/2005 Removed ActivePerl plugin. It has a security [bug](#) and its functionality is now in X-Chat itself (`irc_which_front` option, set to default in this build). Also, fixed the missing "Connect to IRC server" menu entry on links.
- 09/07/2005 X-Chat 2.6.5 is out. As always, check the [changelog](#). GTK+ libraries are now optional, provided that they are in the path. Updated internal GTK+ to 2.6.8 with latest theme engines, ActivePerl to 8.4.11, Inno Setup to 5.15.
- 06/14/2005 X-Chat 2.6.4 is out. Fixed GTK+ image loading problem, module list generation in installer is now more reliable. Updated to GTK+ 2.6.6, Inno Setup 5.14, ActivePerl 8.4.10, ActivePerl 8.4.10.
- 05/31/2005 Updated GTK+ and GTK+ themes to latest Alex Shaduri versions. Installer now sets private application path for X-Chat and theme utility, instead of global ones to avoid clashing with other applications' GTK+ runtimes.
- 05/18/2005 For all of you who hated to run two installers, X-Chat build no longer uses any GTK+ Runtime Environment. Instead, GTK+ libraries are included in the X-Chat installer. They are from Alex Shaduri installer, so you also get GTK+ theme engines, themes and graphical theme preferences utility (in Start Menu). GTK+ libraries also have to be in system path. Installer tries to modify system path, and if it has not enough privileges, it modifies user path only. So you have to install X-Chat with administrator privileges for several users or have them modify path themselves. On Windows 9x, installer modifies `autoexec.bat`, so you must restart Windows then (optional). Upon install, GTK+ input method and Pango module files are generated so GTK+ input methods should work now. Translations component in installer includes both X-Chat and GTK+ translations. Also, installer now uses LZMA ultra compression and just required libraries for X-Chat, so total download is 23 MB less (43 MB). GTK+ uses my [homemade theme](#). And, as usual, all bugs and fixes from latest X-Chat CVS.
- 04/22/2005 GTK+ 2.6 series support. Windows 98 again, so here is new X-Chat build against GTK+ 2.6.2 & Co. (this means it might not work with 2.4 GTK+ anymore). Don't forget to uninstall old GTK+ Runtime before installing new one. ActivePerl is updated to 8.4.9, which finally uses X-Chat compatible `console`, so there's no need to delete it from `%cd` directory anymore. Ruby One-Click installer is upgraded to 1.8.2.5, and OpenSSL to 0.9.8j. In addition to usual fixes and new bugs from CVS version, X-Chat should now name its windows to something more meaningful than "glib@window@level". Also, added Baltic character sets to Server list. In Help > About, X-Chat now shows run-time version of GTK+ instead of renderer which is always Pango on Windows anyway. Default font (FontDys Excelton 3.00) size is now 11 instead of previous 10.5 (fixed Pango bug). Update: GTK+ themes (except for Wimp) are from now on in a [separate package](#) (with Clearlooks). I have updated my [theme](#) to use Clearlooks engine instead of Bluecurve. You can check the results in the latest [screenshots](#), or in [archive](#).
- 04/02/2005 Included a modified Ruby plugin. To use it, you have to install [Ruby 1.8 language distribution](#). If you install Ruby to location other than default and want to use extension modules, change paths accordingly in `plugins/rubyvsnv`. X-Chat is updated to latest CVS version.
- 03/17/2005 X-Chat 2.6.3 is out. Reverted back to ActivePython 2.3, because X-Chat crashes with all Python.org and ActiveState Python 2.4 and 2.4.1. Also, updated to X-Chat 12 FR, and included Vietnamese translation.
- 03/16/2005 X-Chat 2.6.2 is out. I decided to discontinue release builds and only compile CVS version (marked e.g. 2.6.0-1). Official builds are done this way. As I have been only updating CVS builds before, information on the site tended to get incorrect. I've CVS build was compiled against ActivePython 2.4, and release build against 2.3, which has caused confusion. Other enhancements: X-Chat was updated to 1.5, and VERSION reply is now default one again.

2b. Click on the "Download chat" icon (Linux ->Go to step 4 after this)

The screenshot shows the XChat website homepage. The browser address bar displays "http://xchat.org/". The page title is "Windows & Linux Chat Program". The navigation menu includes "NEWS", "DOWNLOAD", "HELP", and "CONTACT". A sidebar on the left lists "Extras" such as "Screenshots", "Scripts & Plugins", "Support Bugs", "Forum", "FAQ", and "Donations". The main content area features a "What is XChat?" section with a description: "XChat is an IRC chat program for both Linux and Windows. It allows you to join multiple IRC channels (chat rooms) at the same time, talk publicly, private one-on-one conversations etc. Even file transfers are possible." Below this is a "Latest News" section with a list of updates from 2009 to 2007. A red box highlights a "Download XChat" button for version 2.8.7 (1.1 Mb). A small inset window shows a screenshot of the XChat application interface.

2c. Choose the latest X-Chat Installer (Mac->Go to step 4 after this)

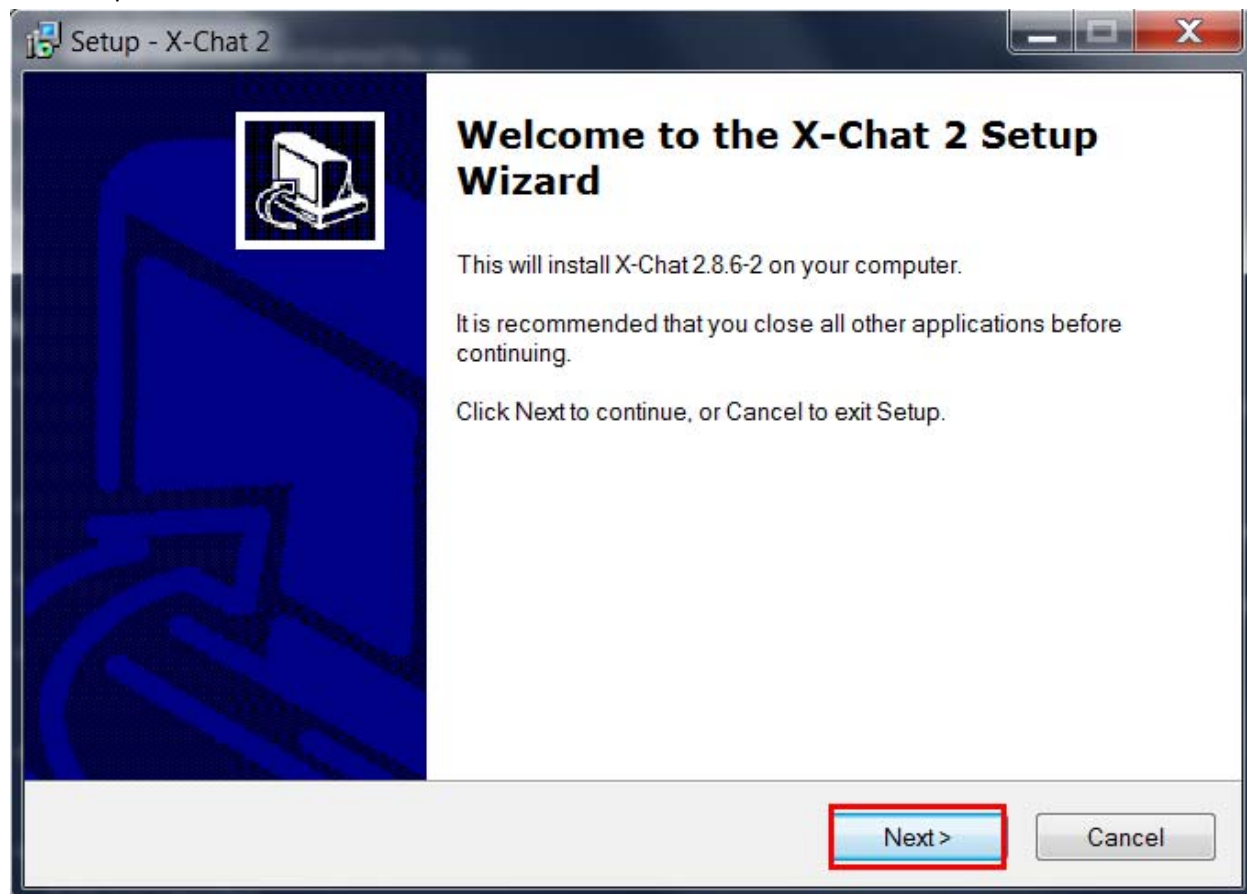

The screenshot shows the XChat Aqua project page on SourceForge. The browser address bar displays "http://xchataqua.sourceforge.net". The page title is "projects::xchat aqua". A "NOTE" states: "I am looking for a Cocoa developer to help with this project. Anyone willing, please email me." The page describes X-Chat Aqua as a Mac OS X IRC client created by Steve Green. The "xchat aqua:download" section highlights the latest public version as "0.17.0-01" released on July 4, 2009. The "xchat aqua:source code" section indicates the repository is available on GitHub. The "xchat aqua:news" section lists several updates from 2009 to 2005. A sidebar on the right lists "tycho's devsite" with links to "about me", "blog", "projects", "arch++", "Chatterbox", "cryptolud classic", "genserv", "maiad", "orlek", "openirc", "xchat-aqua", "affiliations", "uplink laboratories", "ferrous moon", and "introversian software". The footer contains copyright information for 2010 and 2004-2010.

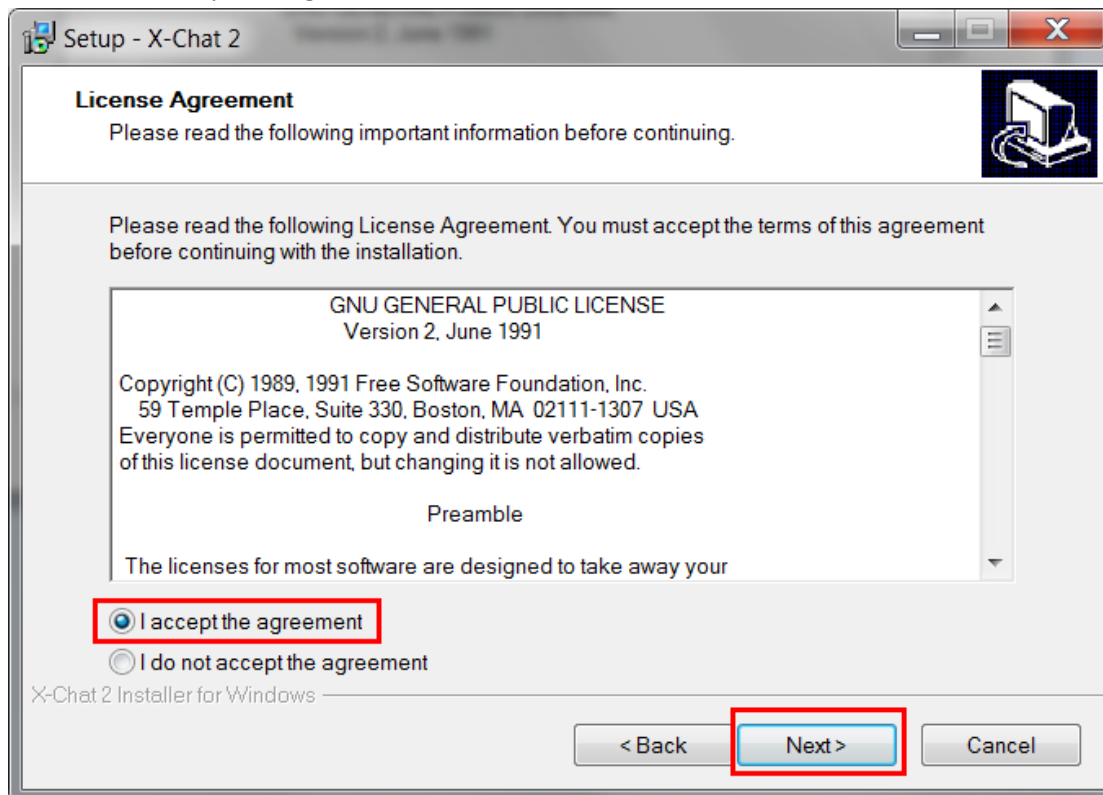

3a. Choose the latest X-Chat Aqua Installer (Windows)

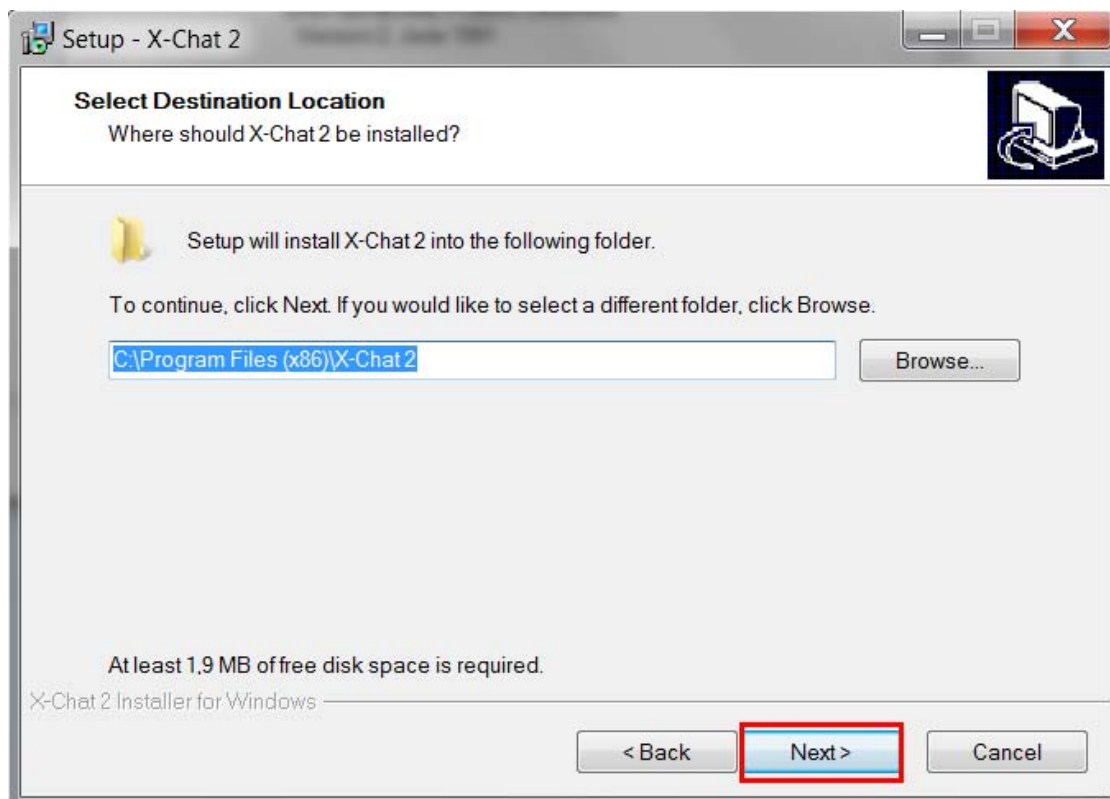

4. Save the installation file to you preferred location
(The following steps are done with the Windows program,
but i assume that it's pretty much the same)
5. Start up the installation file and click "Next"

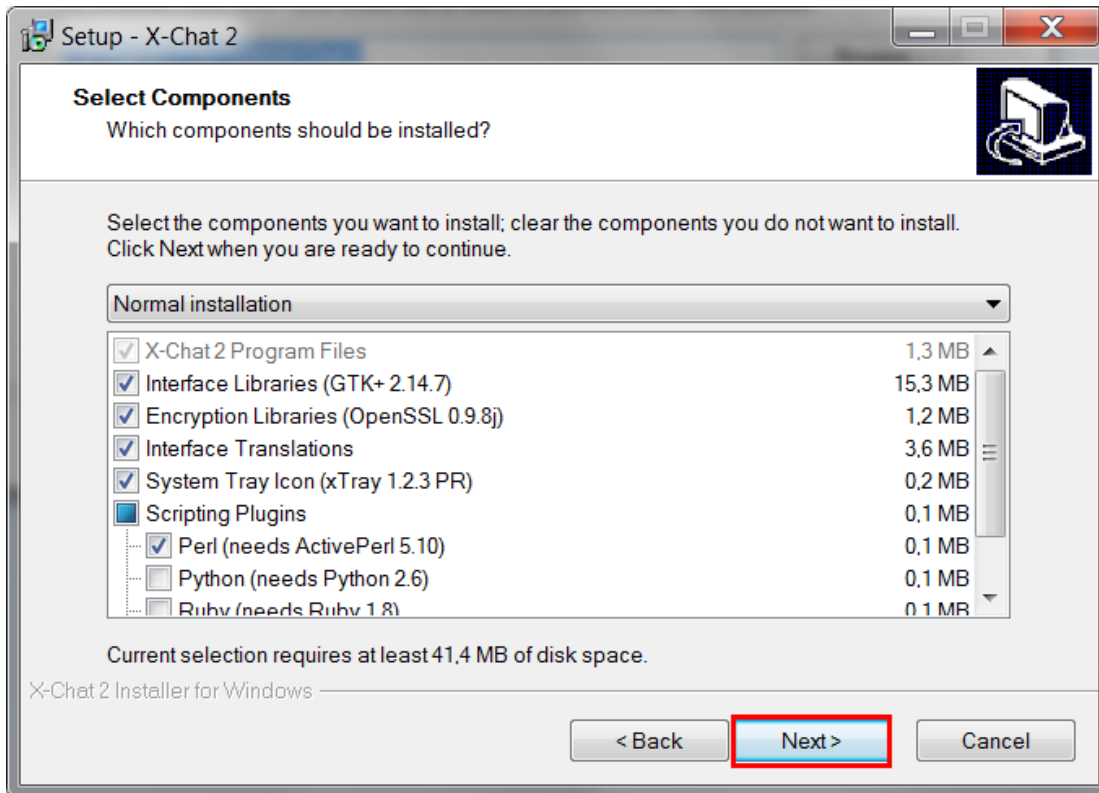

6. Click on "I accept the agreement" and then click "next"

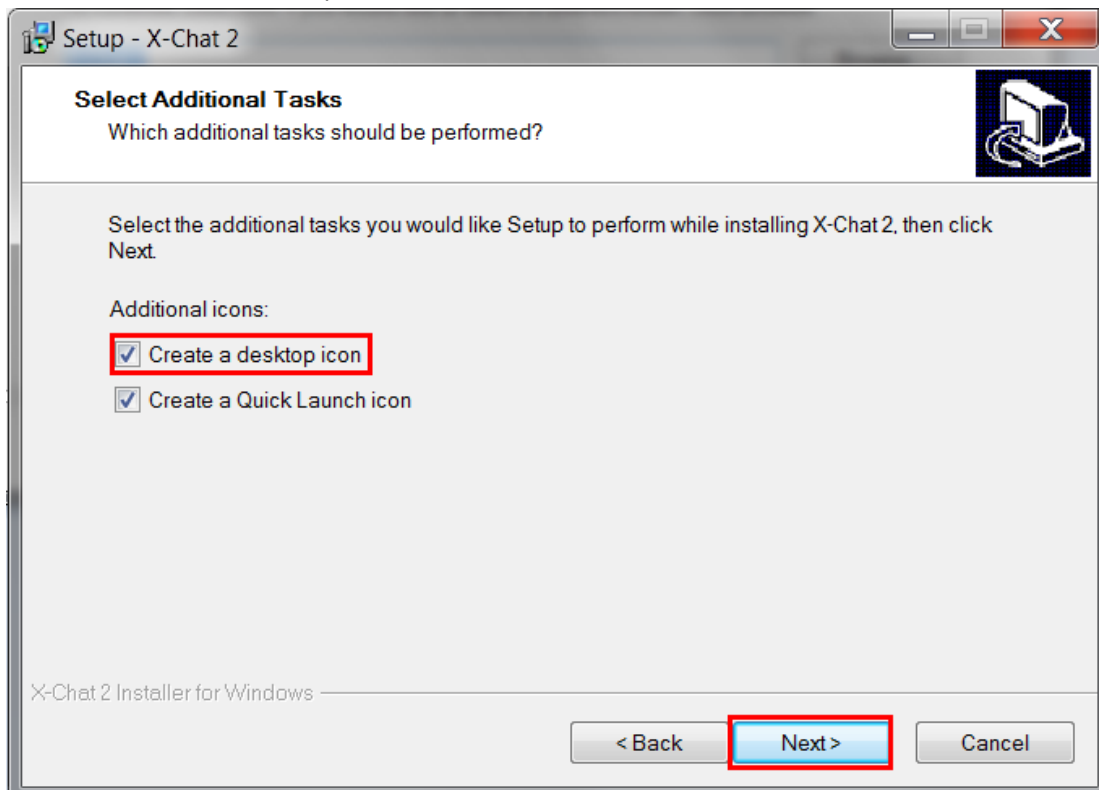

7. Click "Next" or choose different location

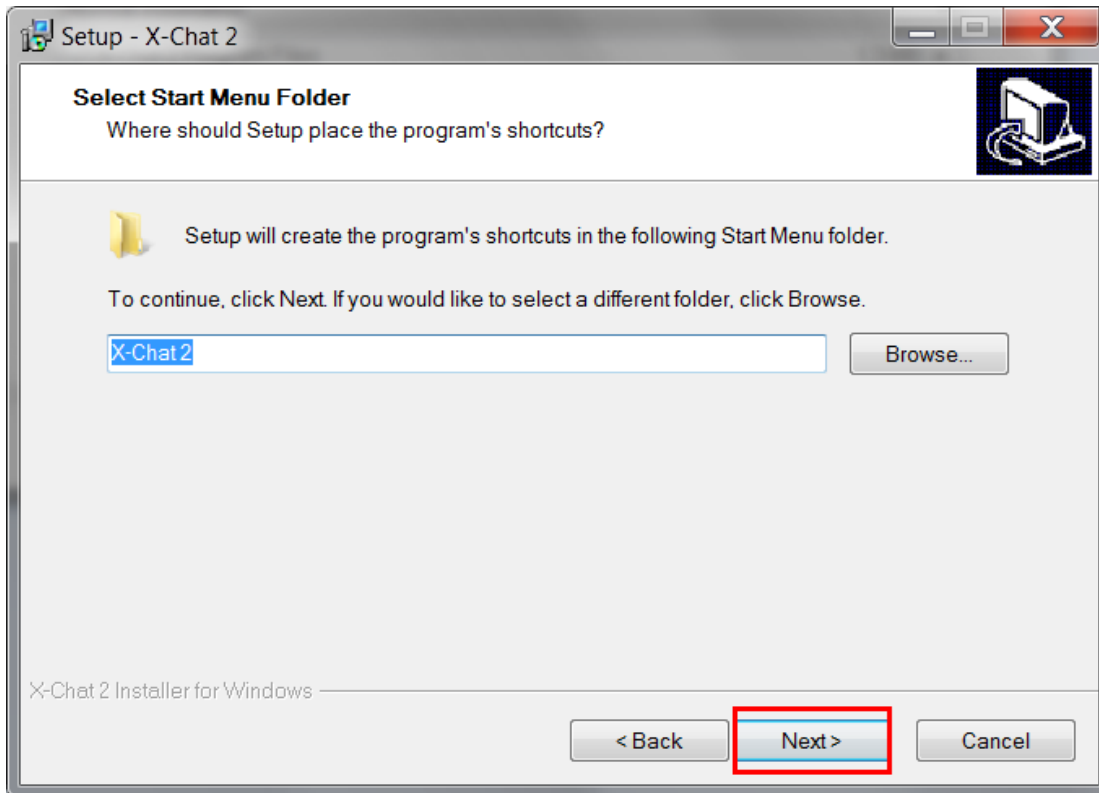

8. Click "Next" or customise components

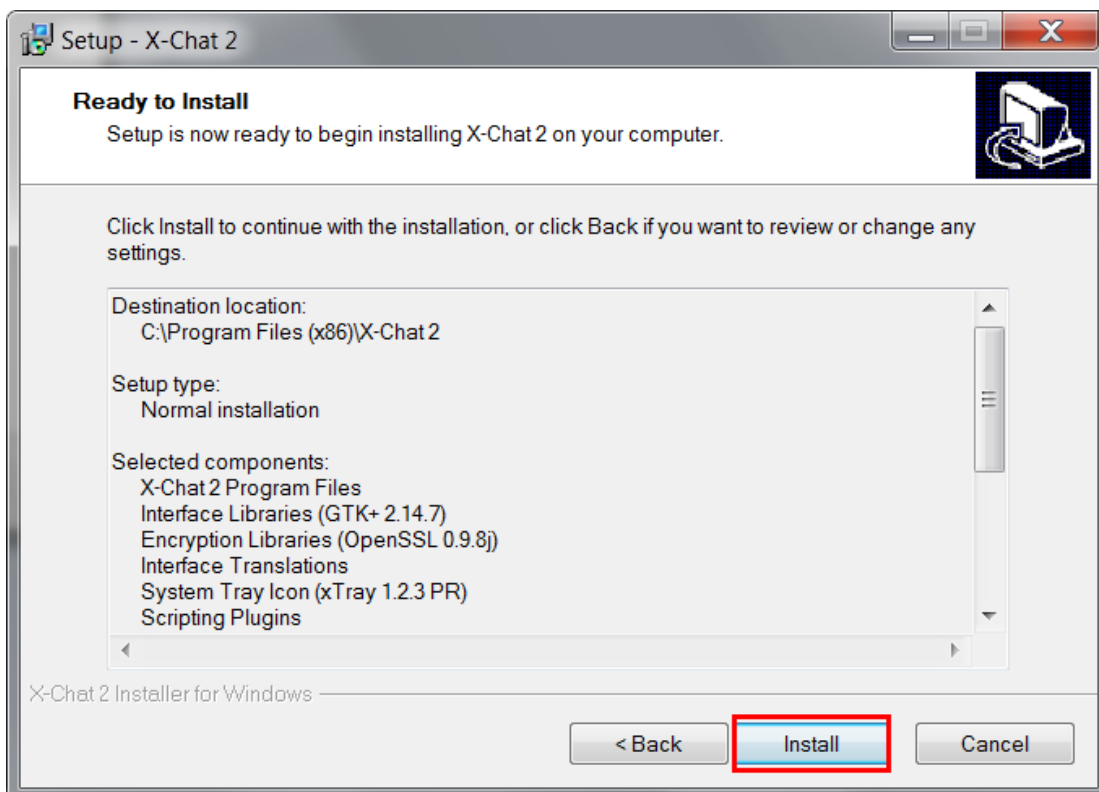

9. Choose "Create a desktop icon" and click "Next"

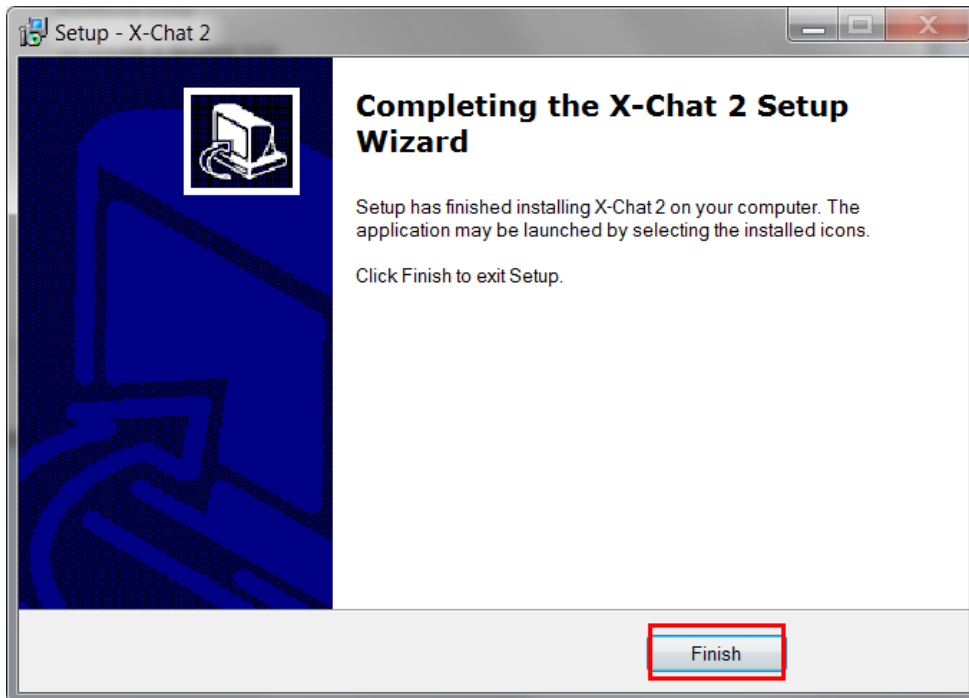

10. Click "Next" or choose another location

11. Click "Install"

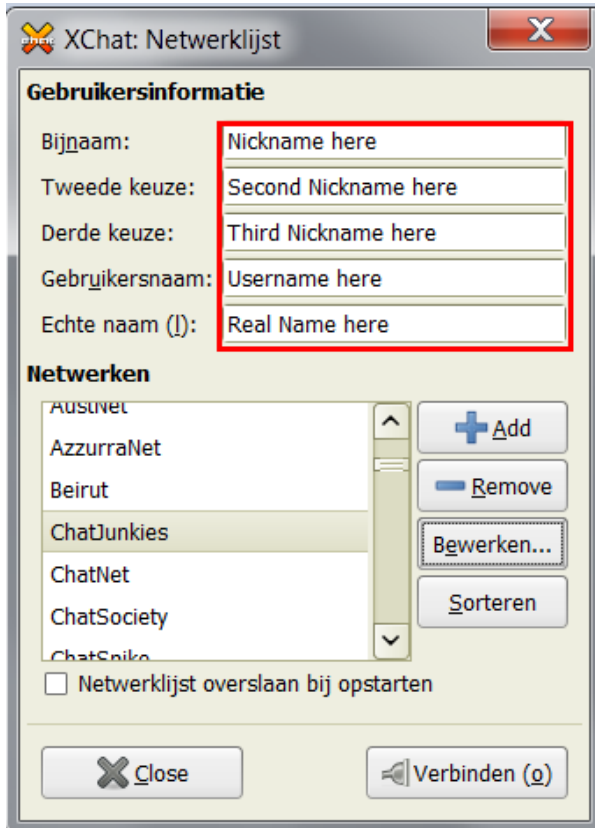

12. Click "Finish"

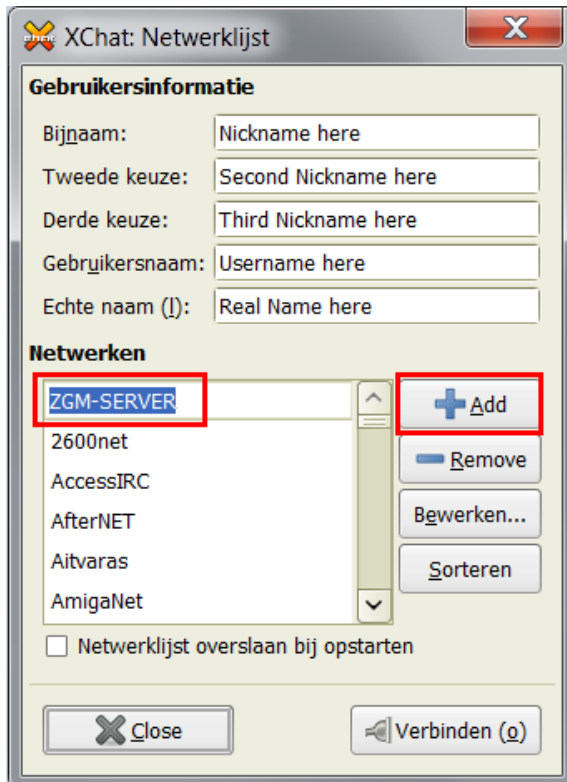

13. Start up "X-Chat" (icon on your desktop)

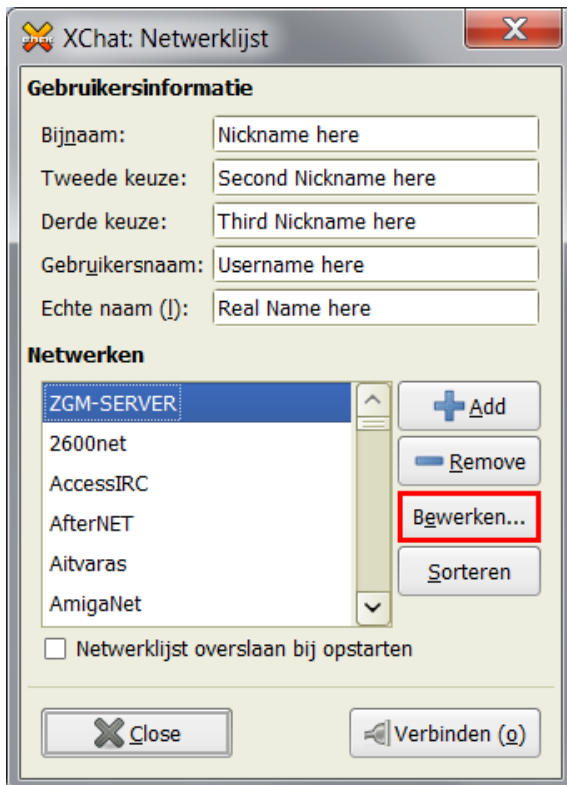

14. Fill in your "Nickname, Username and Real name"

15. Click "Add" and type "ZGM-SERVER"

16. Click "Edit"

17. Fill in the form as shown

(Change "(pass)" with your password,remember your password for later on at step 22)

The screenshot shows the 'XChat: ZGM-SERVER bewerken' window. The 'Servers voor ZGM-SERVER' list contains 'newserver/6667'. The 'Uw details' section has 'Algemene gebruikersinfo gebruiken' checked. The 'Bezig met verbinden' section has 'Auto-verbinden met dit netwerk bij opstarten', 'Bypass proxy server', 'SSL gebruiken voor alle servers op dit netwerk', and 'Onjuist SSL certificaat accepteren' checked. The 'Favorite channels' field is '#zeitgeistmovement.be'. The 'Verbindopdracht' field is 'msg nickserv identify (pass)'. The 'Close' button is at the bottom right.

18. Click "Edit" and fill in the server name and port (press enter)

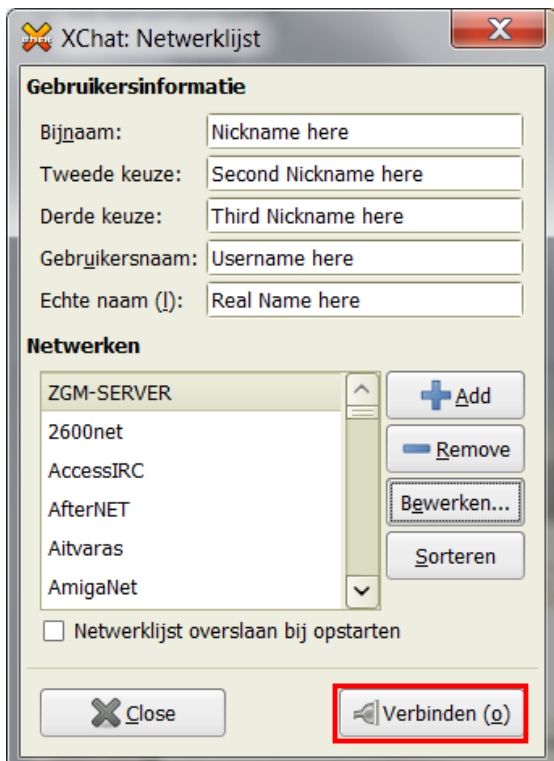

The screenshot shows the 'XChat: ZGM-SERVER bewerken' window. The 'Servers voor ZGM-SERVER' list now contains 'www.thezeitgeistmovement.com/6697'. The 'Bewerken' button is highlighted. The 'Uw details' section has 'Algemene gebruikersinfo gebruiken' checked. The 'Bezig met verbinden' section has 'Auto-verbinden met dit netwerk bij opstarten', 'Bypass proxy server', 'SSL gebruiken voor alle servers op dit netwerk', and 'Onjuist SSL certificaat accepteren' checked. The 'Favorite channels' field is '#zeitgeistmovement.be'. The 'Verbindopdracht' field is 'msg nickserv identify (pass)'. The 'Close' button is at the bottom right.

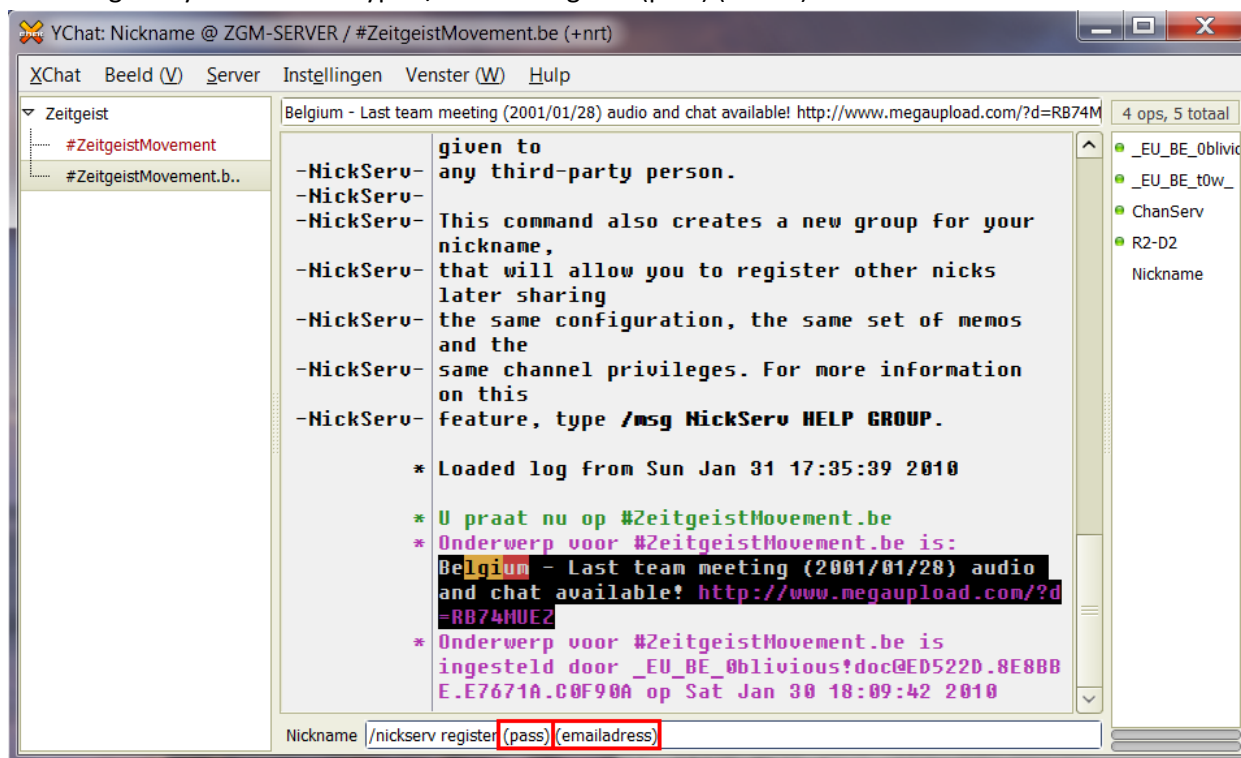

19. Click "Close"

20. Click "Connect"

21. You are now talking in #Zeitgeistmovement.be ,any further questions you can ask here
22. To register you nickname type "/nickserv register (pass) (e-mail)"

23. Now activate you registration at your mail account
24. You are now set up with the Internet Relay Chat
25. If you need help with your preferences or anything else, don't hesitate to contact us at:

<http://thezeitgeistmovement.be/> then click "FORUM" in the tab then "[Main Forum] - English", then "HELP"

Or <http://www.thezeitgeistmovement.be/forum/> then "[Main Forum] - English", then "HELP"

Or on IRC #zeitgeistmovement.be =D

Let's work together towards a better future for every living being!
